

An elastically stretchable composite sheet includes an elastically stretchable first web and an inelastically stretchable second web of thermoplastic synthetic resin fiber which is intermittently bonded to the first web in a y-direction. Component fiber of the second web has its cross-section cut in a direction orthogonal to the y-direction defined by a width  $w$  and a height  $h$  dimensioned to be at a ratio  $h/w$  less than 0.5.

The composite sheet having such a structure improve its flexibility.
